Computer Upgrades

If your computer is healthy but sluggish, consider an upgrade. Adding memory (RAM) or a larger hard disk drive will speed up most systems.

Memory Upgrade \$50

Single most effective upgrade for increasing computer speed and responsiveness.

Add a Hard Disk Drive \$75

When the hard disk drive fills up, the computer takes longer to access data and programs. The computer requires a fair amount of empty disk space to operate properly. An additional drive can provide that space plus more storage for photos, music, documents and programs.

This menu displays just a taste of the services Press Any Key offers. Our prices are reasonable and our service is complete. We offer free pick up and delivery. Please call for more.

Replace Main Hard Drive \$100

If your system starts making unusual noises, your hard drive may be starting to fail. The sooner you replace it, the less data you will lose. Replacing the C drive with a larger, faster drive will speed up system response and provide more storage space for your files and programs.

Upgrade to Windows 7 \$100

Windows 7 is more than a pretty interface. This new operating system offers easier computing through new ways to organize and find files and programs.

Computer Repair

A nonresponsive computer or one that responds incorrectly requires repair. Some repairs can be performed quickly in your home. Others will require take-out service.

Laptop/Desktop Repairs \$40+

Computer problems vary in complexity. Some may require a simple settings change; others may be too costly for the age of the computer. Think about what has changed on the computer: new software or hardware, new toolbars, Windows update, antivirus software stopped updating. Was there a lightning storm? Power outage?

Diagnosis & Troubleshooting \$40

Diagnostic fee will be waived if repairs are performed. This minimum fee will cover the cost of many issues.

Virus/Malware Removal \$100

While many viruses, spyware and trojans can be removed without loss of data, some particularly bad infections may result in data loss.

Replace Failed Hard Disk Drive \$175

Replacing a failed drive includes the physical installation, and reinstalling Windows. You will supply the restoration CD or original Windows CD or DVD and its Product Key.

System Restore \$70

Using *your* restoration CD or DVD or restore partition, the system will be restored to its original state. Please provide Windows Product Key.

Wifi Network Troubleshooting \$40

Lost connection? Let's find out why.
